CERTIFICATE OF RESULTS FOR SAMPLE ID #:

539894

OWNER'S NAME: CATHY COLE SARAH KALKES VALERIE YATES
PET'S NAME*: MEADOWLAWN NINEBARK RIKKIDICULOUS
PET'S REGISTRATION #: DN78973402
PET'S BREED: AUSTRALIAN SHEPHERD
DATE TESTED: 6/9/2026

TEST	RESULT**	TEST RESULT EXPLANATION***
Canine Multifocal Retinopathy 1 (CMR1)	A	(CLEAR/NORMAL): These dogs have two copies of the normal gene and will not develop canine multifocal retinopathy.
Collie Eye Anomaly (CEA)	B	(CARRIER/NOT AFFECTED): These dogs have one copy of the normal gene and one copy of the mutation associated with this disease. They will not develop Collie eye anomaly.
Degenerative Myelopathy (DM)	A	(CLEAR/NORMAL): These dogs have two copies of the normal gene and will not develop degenerative myelopathy.
Hyperuricosuria (HU)	A	(CLEAR/NORMAL): These dogs have two copies of the normal gene and will not develop a urate stone disorder.
Multidrug Sensitivity (MDR1)	A	(CLEAR/NORMAL): These dogs have two copies of the normal gene and will not develop multidrug sensitivity.

*GenSol warrants its test results to be accurate for the sample obtained from the above pet. In the event of a valid claim, owner's sole remedy is a refund of the fee paid. IN NO EVENT SHALL GENSOL BE LIABLE FOR INDIRECT, CONSEQUENTIAL OR INCIDENTAL DAMAGES OF ANY KIND. Any claim must be asserted within one year of the report of test results.

**All samples submitted to GenSol become the property of GenSol and may be used for internal quality control and/or research purposes. Test results provide information concerning a pet's DNA sequence and are not an indication or guarantee of pet's disease state or condition. Test results alone should not be used to diagnosis, treat or prevent disease.

TEST	RESULT**	TEST RESULT EXPLANATION***
Progressive Rod-Cone Degeneration (PRA-PRCD)	A	(CLEAR/NORMAL): These dogs have two copies of the normal gene and will not develop progressive rod cone degeneration.
Chondrodystrophy And Intervertebral Disc Disease Risk (CDDY-IVDD)	A	(CLEAR/NORMAL): These dogs have two copies of the normal gene and do not possess the mutation that leads to shortened legs and increased risk for intervertebral disc disease.
Hereditary Cataracts (HC)	A	(CLEAR/NORMAL): These dogs have two copies of the normal gene and will not develop HSF4 hereditary cataracts.

Valerie Yates 109 Canaan Road Renfrew, ON K7V 3Z4 Canada	ND	Meadowlawn Ninebark Rikkidiculous AKC # DN78973402	Australian Shepherd	04/15/2024	M	Red Merle w/ Wh & Tan

Email: contact@ninebarkaussies.com

Description: Two high quality, air-dried blood smears (one of which was broken) were submitted for hematologic examination. Following Diff Quik staining and microscopic examination, all neutrophils and other granulocytes have hyposegmented nuclei with a mature, coarse chromatin pattern. This cellular morphology is consistent with Pelger-Huët anomaly.

Diagnosis: Positive for Pelger-Huët anomaly (heterozygous phenotype).

Comment: Pelger-Huët anomaly is transmitted as an autosomal dominant trait with incomplete penetrance in Australian Shepherds. The anomaly is not associated with an increased incidence of infection. If animals with Pelger-Huët anomaly are bred to each other, litter sizes may be reduced because the homozygous state of the anomaly usually is lethal *in utero*. Elimination or suppression of this genetic trait may be accomplished by selecting and breeding only those individuals with a normal granulocyte phenotype (appearance). Please contact Dr. Latimer at latimer49@gmail.com if you have additional questions concerning this test result or questions about this hereditary disorder of granulocyte development.
